DETAILED ACTION

1. This office action is in response to application 10/816,764 and amendment filed on 08/22/2006. Claims 1-24 remain pending in the application.

Election/Restrictions

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-16 (Group 1), drawn to a method of manufacturing an integrated circuit (IC) device having a given layout by **simulating how structures within the layout will pattern on a wafer** for a plurality of resolution enhancement techniques (RETs), classified in class 716, subclass 21.

II. Claims 17-21 (Group 2), drawn to a **photolithography processing system comprising for each combination of numerical aperture (NA) values, illuminator parameters and reticle parameters, classifying structures within the associated simulated layouts** based on manufacturability, classified in class 716, subclass 21.

III. Claims 22-24 (Group 3), drawn to a method of **minimizing wafer critical dimension (CD) variation** in an integrated circuit (IC) device wafer patterned with a desired layout, classified in class 716, subclass 21.

Inventions 1-16 (Group 1) and 17-21 (Group 2) are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed

Art Unit: 2825

does not require the particulars of the subcombination as claimed, because Group 2 includes **classifying structures within the associated simulated layouts**. The subcombination has separate utilities such as “a photolithography processing system comprising for each combination of numerical aperture (NA) values, illuminator parameters and reticle parameters, classifying structures within the associated simulated layouts based on manufacturability”.

Inventions 1-16 (Group 1), 17-21 (Group 2), and inventions 22-24 (Group 3) are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed, because Group 3 includes **minimizing wafer critical dimension (CD) variation**. The subcombination has separate utilities such as “a method of minimizing wafer critical dimension (CD) variation in an integrated circuit (IC) device wafer patterned with a desired layout”.

3. Because these inventions are distinct for the reasons given above, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
